

Agronomy and Forage

2012 Alfalfa Quality Information

Goal Relative Feed Quality (RFV) of 150

Sample Information from 4/30/12

Alfalfa growth was off to an early start with record warm March temperatures. The more seasonal April temperatures have slowed plant development recently.

Generally speaking however our alfalfa crop is 2-3 weeks ahead of average year.

Additional PEAQ and Scissor Cutting quality information will be taken the week of May 7th.

Thanks to our sponsors and cooperators, the Sheboygan County Forage Council, Adell Coop, Farmers Feed & Grain, Helena Chemical, and Kettle Lakes Coop.

For more information contact Mike Ballweg at (920) 459-5910.
