

About the 2022 Agronomy Day

With record high input prices and tight supplies, planning ahead, exploring alternatives, and sharpening the pencil to analyze the cost of crop production is more important than ever. Plan to spend the day learning about agronomic practices that provide the greatest probability for a profitable return.

Learn about weed management alternatives, planting soybeans "Green" and stretching your fertilizing dollar.

Lastly, marketing and risk management need to be a major focus. Have your marketing plans and pricing objectives been determined? What marketing tools may help you reach your price targets? What are corn and soybean ending stocks telling us about supply and demand and prices for 2023?

Thanks to our industry sponsors for their support of this educational program.

Plan to attend an informative and enjoyable day.
